

Principles for Network and User Interfaces

We want our customers to be able to immediately launch the services we enable without having to perform elaborate network integration and program user interfaces, as this is usually the quickest and most cost-effective approach. For this reason, we offer **end-to-end solutions for your services and generally provide all the network and user interfaces customized to your specifications.**

In addition to the above, we can also provide you with the **complete data dictionary for the solution and comprehensive Application Programming Interfaces and Software Development Kits for web, WAP, SMS, IVR, USSD, content purchasing, billing, provisioning, etc.**

Thus, you as our customer always have the option to implement and/or modify network and user interfaces via ECT, in-house or via a third party. Whatever option you choose, we empower you to further enhance and augment your interfaces as required.
